1 Fake causative

In this paper, we examine the phenomenon of *fake causativization*, illustrated in (1) from Tatar¹:

- (1) trener marat-nı jeger-t-ter-de.²
 trainer M.-ACC run-CAUS-CAUS-PST
 ‘The trainer made Marat run.’

Morphologically, (1) involves a *double causative* of the unergative verb ‘run’, shown in (2).

- (2) marat jeger-de.
 M. run-PST
 ‘Marat ran.’

Syntactically, (1) is a transitive clause where the causer appears in the nominative, and the causee, the argument of the non-derived verb stem, receives the accusative case marking. What is surprising about (1) is that one of the two occurrences of the causative morpheme (TYR henceforth) makes no visible contribution to the structure and interpretation of the clause. The unergative verb in (2) gets effectively causativized by exactly one instance of TYR, as shown in (3):

- (3) trener marat-nı jeger-t-te.
 trainer M.-ACC run-CAUS-PST
 ‘The trainer made Marat run.’

¹ The study has been supported by Russian Scientific Foundation (PHΦ), project No 14-18-03270 “Word order typology, communicative-syntactic interface and information structure in the world’s languages” and Russian Foundation for Basic Research (grant # 13-06-00884). The data for the study came from the fieldwork on the Mishar dialect of Tatar as spoken in Rybushkino (Nizhegorodskaya oblast, Russia) conducted by the Department of Theoretical and Applied Linguistics, Faculty of Philology, Moscow State University in 2012.

² The causative morpheme *tır* appears in two variants, *-t-* and *-tır-*. Their distribution is conditioned phonologically: the *-t-* allomorph appears after sonorants in multisyllabic stems, *-tır-* is used elsewhere.
